Experiment - 1

SETUP & CONFIGURE a LAN using a Switch and Ethernet cables

What is LAN?

A Local Area network (LAN) connects devices within a limited area such as a home school or office It allows device to share data, printer, and other resources through a network switch

How to setup a LAN

1) Plan the network topology and arrange the devices

2) Connect 4 computers to a switch using Ethernet cabels.

3) Assign IP address

1) PC1 - 10.1.1.1
2) PC2 - 10.1.1.2
3) PC3 - 10.1.1.3
4) PC4 - 10.1.1.4
5) Subnet Mask - 255.0.0.0

4) Configure the switch with IP 10.1.1.5

5) check connectivity using the ping command

6) Share a folder with computers on the LAN

7) Access the shared folder from other computers.

Result:-

Thus the setup and configure a LAN using a switch and Ethernet cabel as studied.
