Experiment 10 b)

WIRELESS INTERNETWORKING

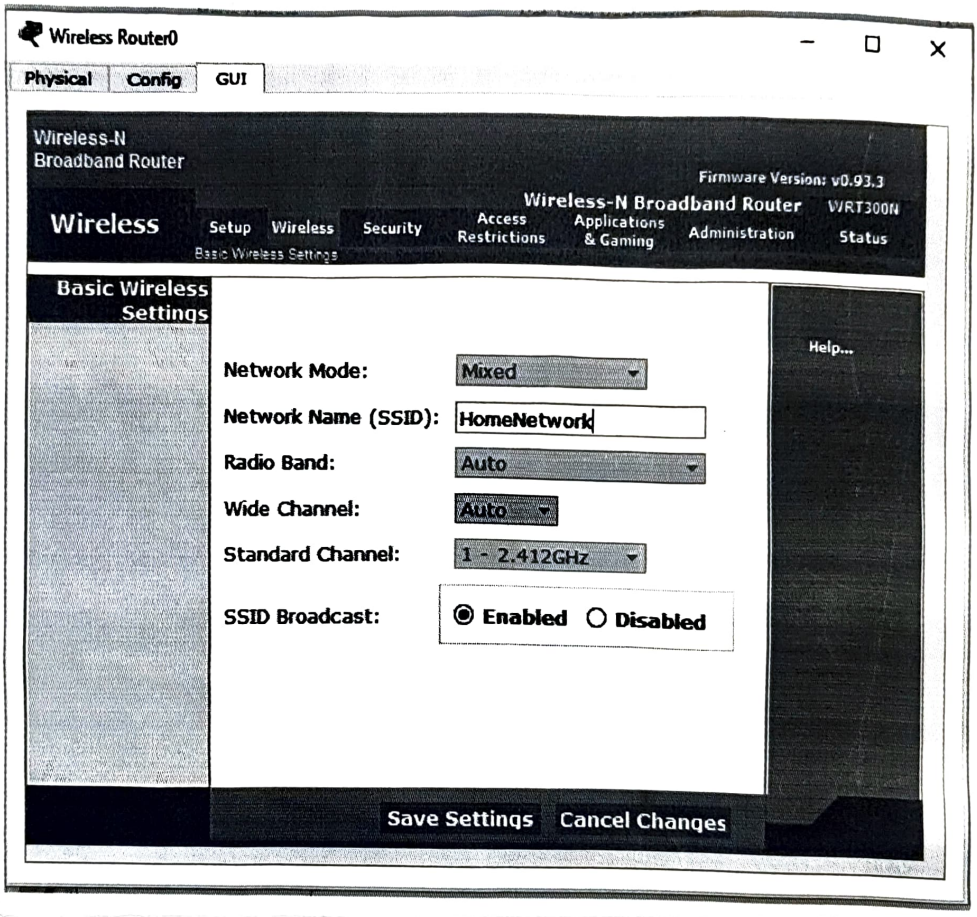

Aim:

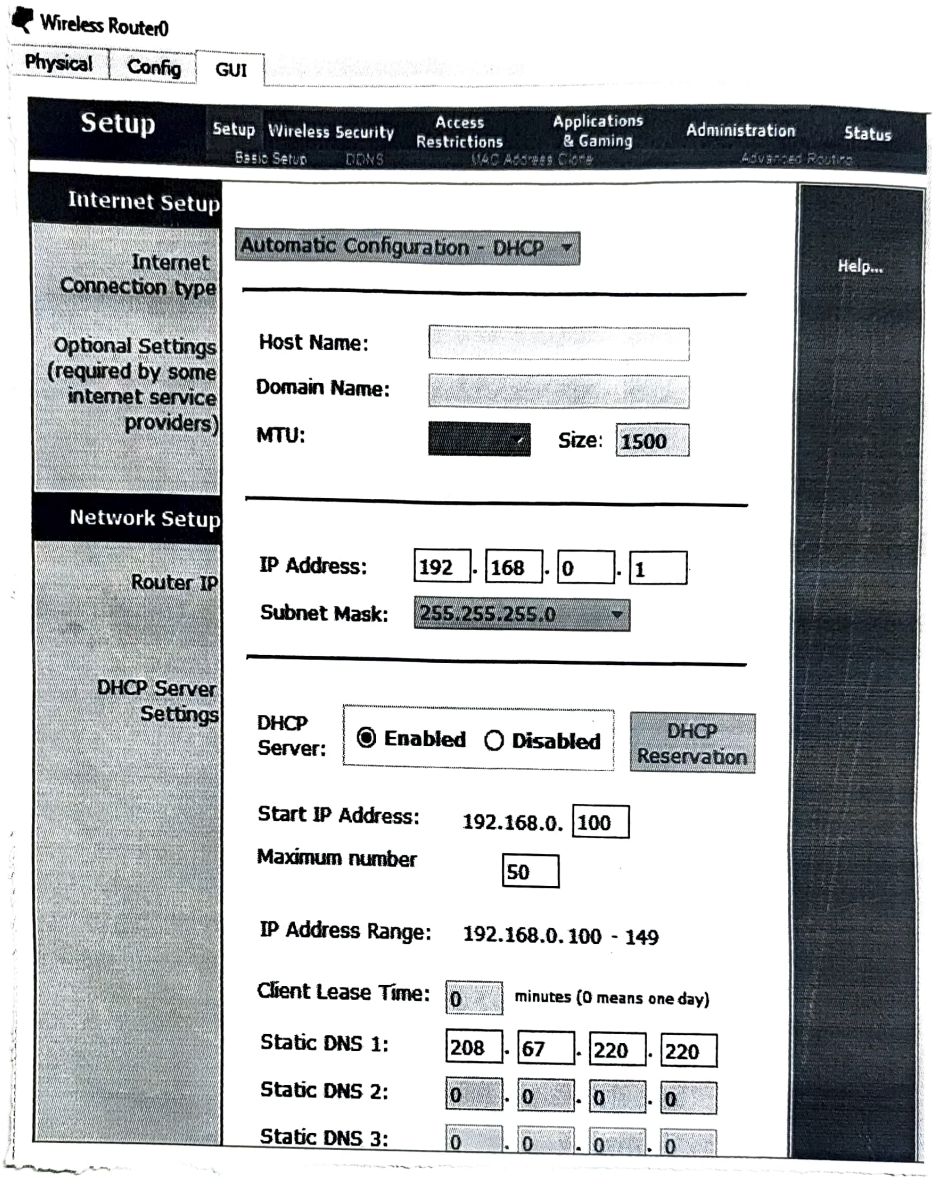

To design & configure an internetwork using a wireless router, DHCP server and Internet cloud.

Algorithm:

1) Open cisco Packet Tracker
2) Add a wireless router, DHCP server and Internet cloud.
3) Add the required wireless devices
4) Connect the devices to the wireless router.
5) Configure the wireless router settings
6) Configure the DHCP Server with IP settings
7) Enable DHCP for automatic IP assignment
8) Connect the wireless device to the network.
9) Verify the assigned IP address.

10) Test connectivity between the devices & Internet cloud

Result:-

Thus the wireless internetwork was successfully configured & connectivity was verified.
